

# Woodstocks Stock Control Xml Version User Manual

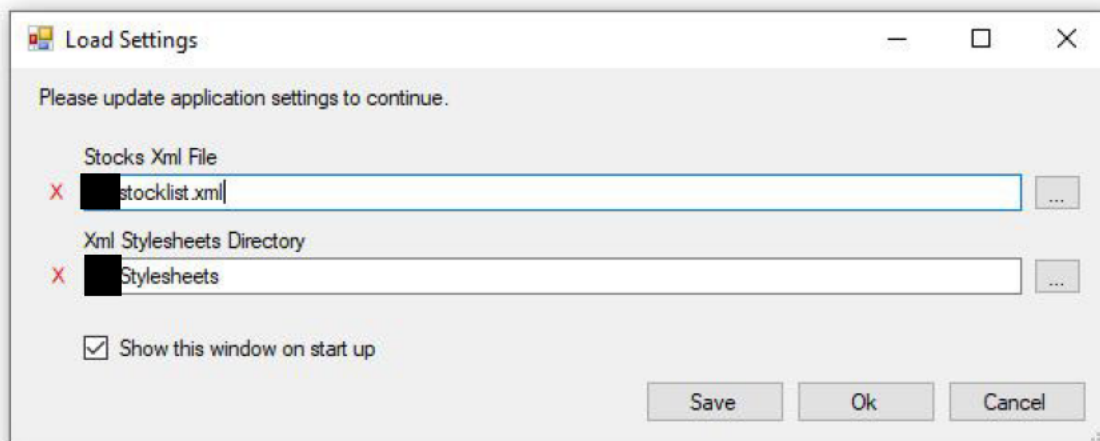

Joshua Grimmett, Skillage I.T

# Setup

This application runs based off an XML file to load and save stocks. This XML file's location can be chosen and modified from within the program. By default, upon loading the program, a "Load Settings" window will appear.

The "Load Settings" window consists of two text box inputs for entering file load settings, three buttons and a check box. If the file path in the text boxes are valid the box will have a green tick on the left, and if invalid a red cross.

By default, the "Show window on start up" box will be checked but it may be toggled to disable window on start up. If a file path is invalid the window will open on start up.

The “Save” button allows the user to save the settings and the “Ok” button allows the user to continue. The “Cancel” button allows the user to exit the entire program. If the user clicks the “Save” button it will save regardless of the next action, e.g. “Cancel” or “Ok”.

Item Code	Description	Current Count	On Order
A0001	Horse on Wheels	30	<input checked="" type="checkbox"/>
A0002	Elephant on Wheels	2	<input checked="" type="checkbox"/>
A0003	Dog on Wheels	23	<input type="checkbox"/>
A0004	Seal on Wheels	3	<input checked="" type="checkbox"/>
A0005	Bear on Wheels	7	<input checked="" type="checkbox"/>
A0006	Teddy Bear	2	<input type="checkbox"/>
A0007	Clown	5	<input checked="" type="checkbox"/>
A0008	Puppy(crouch)	3	<input checked="" type="checkbox"/>
A0009	Puppy(stand)	9	<input checked="" type="checkbox"/>
A0010	Puppy(jump)	2	<input type="checkbox"/>
A0011	Pupp(lying)	1	<input type="checkbox"/>
A0012	Cart with Blocks (50)	123	<input type="checkbox"/>
A0013	Cart with Blocks (100)	5	<input checked="" type="checkbox"/>
A0014	Cart with Blocks (200)	4	<input checked="" type="checkbox"/>
A0015	Train with 0 Carriage	12	<input checked="" type="checkbox"/>
A0016	Train with 1 Carriage	10	<input checked="" type="checkbox"/>
A0017	Train with 2 Carriage	5	<input type="checkbox"/>
A0018	Train with 3 Carriage	4	<input type="checkbox"/>
A0019	Train with 4 Carriage	5	<input checked="" type="checkbox"/>
A0020	Train with 5 Carriage	2	<input checked="" type="checkbox"/>
A0021	Building Blocks (20)	15	<input checked="" type="checkbox"/>
A0022	Building Blocks (30)	13	<input checked="" type="checkbox"/>
A0023	Building Blocks (40)	16	<input checked="" type="checkbox"/>

Load Stocks

Save Stocks

Item Code: A0001

Description: Horse on Wheels

Current Count: 30

On Order: ☒

The program has a simple interface with two tab views. The main window provides the functionality for loading or reloading the stocks from the stocklist file, being located on the right hand side, labeled: “Load stocks”.

To then save the stocks after editing another button located on the right hand side, underneath the “Load Stocks” button, labeled: “Save Stocks”.

The main table on the left hand side shows the list of stocks. The values are separated into rows and columns, under the stock's attributes: Item Code, Description, Current Count and On Order. Using the table the user may edit the Current Count field by selecting the Current Count cell corresponding with the stock item by entering the new value. The user can also edit the Current Count by utilising the text box on the right hand side, labeled: "Current Count".

Functionality for row sorting is also available, by selecting the column to sort by at the top of the table. To toggle ascending order, the user may once again click the selected sorting column.

## Styling

The Woodstock program includes functionality for adding CSS to the XML when saving. To apply a stylesheet choose the "Save Stocks" button. This will load a "Save as" window with a listbox containing available stylesheets. The user has the option to select multiple stylesheets by ticking the box and choosing "Save". After saving the user will need to reload the stocks to view the new styling changes.
